PROJECT

BLOOD BANK MANAGEMENT SYSTEM

Besant technologies

Tasks

- Built a **comprehensive system to manage blood donor and recipient data**, enhancing tracking and availability of blood inventory.
- Designed **CRUD functionalities** for donor registration, blood group management, and blood request tracking using Python and MySQL.
- Implemented **role-based access** to manage secure operations like stock updates, donor approvals, and history logs.
- Integrated **search filters** by blood group, location, and availability to quickly find matching donors or blood units.
- Strengthened backend logic with **form validations, relational database design**, and data integrity checks for a reliable system.

Weather App

Besant technologies

Tasks

- Developed a **Python-based weather app** that fetches real-time weather data using the OpenWeatherMap API.
- Implemented a **user-friendly interface** using Streamlit for inputting city names and displaying weather details.
- Parsed and displayed data such as **temperature, humidity, pressure, wind speed, and weather conditions** with clear formatting.
- Incorporated **error handling** for invalid inputs and API response issues to improve robustness and user experience.
- Gained practical experience in **API integration, JSON parsing**, and working with external libraries such as requests and datetime.
